GE23131-Programming Using C-2024

Question 1

Correct

```
Input
                                          Expected Got
                                           125
                                                        125
                                                        80
                                5 5 5
                                1 2 40
                                10 5 41
                                7 2 42
                        Passed all tests! <
Question 2
                       You are given n triangles, specifically, their sides a_i, b_i and c_i. Print them in the same style but sorted by their areas from the smallest one to
Correct
                       the largest one. It is guaranteed that all the areas are different.
P Flag question
                       The best way to calculate a volume of the triangle with sides \boldsymbol{a}, \boldsymbol{b} and \boldsymbol{c} is Heron's formula:
```

```
S = \ddot{O} p * (p - a) * (p - b) * (p - c) where p = (a + b + c) / 2.
Input Format
First line of each test file contains a single integer n. n lines follow with a_i, b_i and c_i on each separated by single spaces.
Constraints
1 \le n \le 100
1 \leq a_i, b_i, c_i \leq 70
a_i + b_i > c_i, a_i + c_i > b_i and b_i + c_i > a_i
Output Format
Print exactly n lines. On each line print a integers separated by single spaces, which are a_i, b_i and c_i of the corresponding triangle.
Sample Input 0
3
7 24 25
5 12 13
345
Sample Output 0
3 4 5
5 12 13
7 24 25
Explanation 0
The square of the first triangle is 84. The square of the second triangle is 30. The square of the third triangle is 6. So the sorted order is the
reverse one.
Answer: (penalty regime: 0 %)
    1 #include<stdio.h>
    2 #include<math.h>
    3 #include<stdlib.h>
    4 typedef struct
